Verification basis and evidence identities

This record is derived from the authenticated GitHub CLI/API execution output and the terminal PASS result produced by the authorized v0.1.5 procedure. The procedure verified the live branch, exact Git blob and working-copy identities under canonical checkout mode, staged scope, locked artifacts, public branch, tag, release, and redownloaded release asset. This is an administrative verification record and is not independent external human peer review.

Boundary and final disposition

- This record does not modify, supersede, or reopen any locked Final v1.0 document or lock record.
- The correction preserved normal Git history and did not erase the initial publication commit.
- The release asset is an administrative continuity package; it is not a successor Master Hash Manifest.
- GitHub publication and cryptographic verification do not establish truth, authority, acceptance, reception, safety, or independent peer review.
- No Zenodo, Archive.org, Arweave, PhilPapers, MERLOT, website, discovery-layer, or other external action is recorded or authorized here.

FINAL DISPOSITION: PASS. The Interrogative Conscience fourteen-document core is published on GitHub, its eleven CSV byte identities are corrected and protected, its metadata is bound to the release-target commit, its tag and release are public, and its 433,058,687-byte continuity asset was redownloaded and verified against SHA-256 and SHA-512. No locked artifact was modified; no force-push or history rewrite occurred.
